**Encyclopedia of Physics Research**

Nancy B. Devins 2012 This book presents current research in the field of physics, with a particular focus on atomic molecular and optical physics, as well as cryogenics and photonic crystals. It discusses topics that include pulse shaping in laser-light dynamics; excitation of atoms and ions by electron impact; Fiber Bragg Gratings and their applications as temperature and humidity sensors; liquid oxygen magnetohydrodynamics; cryogenic treatment and fatigue resistance; cryogenic grinding; fabrication of applications on optical fibers; and, phthalocyanines and their applications and a photonic band gap for quasicrystal-related structures.

**Free Radicals in Biology**

William Pryor 2012-12-02 Free Radicals in Biology, Volume VIII covers the mechanisms for the generation of free radicals. This volume contains eight chapters that discuss the biology and chemistry of oxy-radicals in mitochondria and the radical-mediated metabolism of xenobiotics. The opening chapter describes the mechanisms of free radical production in enzymatically promoted lipid peroxidation, generally in microsomes or microsomal lipids. The subsequent chapters explore the biochemistry and biology of plant and animal lipoxigenases; the production of superoxide and hydrogen peroxide in mitochondria; and the biological role of these species in mitochondria and related systems. The discussions then shift to the effects of superoxide production in white blood cells, with an emphasis on an evaluation of the oxygen-dependent reactions of the important phagocytic cells, the monocytes, and the polymorphonuclear leukocytes. This volume further covers the formation and role of oxy-radicals in the red blood cell, which is a very useful system for studying the protection of biological tissue against radical-mediated damage. A chapter presents a comprehensive review of the production of free radicals during the metabolism of xenobiotics. The last chapters provide an overview of the enzymology, biological functions, and clinical chemistry of glutathione peroxidase. These chapters also examine a number of gerontological principles and the effect of antioxidants in aging. Chemists, biologists, and physicists will find this book of great value.

**Computational Molecular Biology**

J. Leszczynski 1999-06-10 This book covers applications of computational techniques to biological problems. These techniques are based on an ever-growing number of researchers with different scientific backgrounds - biologists, chemists, and physicists. The rapid development of molecular biology in recent years has been mirrored by the rapid development of computer hardware and software. This has resulted in the development of sophisticated computational techniques and a wide range of computer simulations involving such methods. Among the areas where progress has been profound is in the modeling of DNA structure and function, the understanding at a molecular level of the role of solvents in biological phenomena, the calculation of the properties of molecular associations in aqueous solutions, computationally assisted drug design, the prediction of protein structure, and protein-DNA recognition. This volume comprises a balanced blend of contributions covering such topics. They reveal the details of computational approaches designed for biomolecules and provide extensive illustrations of current applications of modern techniques. A broad group of readers ranging from beginning graduate students to molecular biology professions should be able to find useful contributions in this selection of reviews.

contextualizes what Americans have done for fun since 1830, showing the reciprocal
nature of the relationships among social, political, economic, and cultural forces and

Economic Analysis of Product Innovation Manuel Trajtenberg 1990 One of the most
striking features of contemporary industrial economies is their ability to offer
an ever-expanding and improving range of products. Personal computers, tiny
pacemakers, digital watches, and VCRs simply did not exist, and were not even
dreamt of, only a few decades ago. Such product innovations play an increasingly
important role in modern economic growth, and it is therefore imperative that
economists come to grips with them, just as they have done with traditional
economic phenomena. In this skilfully crafted and imaginative study, Manuel
Trajtenberg provides the tools and an analysis to quantify and evaluate product
innovation. He argues persuasively that the magnitude of an innovation should be
equated with the social benefits that it generates. Drawing from the
"characteristics approach" to demand theory and the econometrics of discrete
choice, he presents an ingenious method to estimate the benefits from product
innovations that accrue to the consumer over time. His method centers on consumer
preferences for different product attributes -such as speed and size of memory in
computers-and then uses those preferences to evaluate the changes in attributes.

Eutrophication Management and Ecotoxicology Martin C.T. Scholten 2006-03-30 This book bridges the gap between ecotoxicology and limnology, offering an
ecotoxicological perspective on lake management. The text describes eutrophication
of shallow, temperate lakes, and examines the influence of toxic substances on the
aquatic ecosystem, and proposes that nutrients like phosphorus are not the only
important factor in explaining and managing eutrophication. Draws on a range of
studies and experiments, some presented here for the first time.

Danger on the Page Brian Shawver 2015-04-07 Although fiction writers must concern
themselves with "big picture" issues such as plot, theme, and character
development, much of the day-to-day work of writing involves finding answers to
seemingly minor questions: How should I describe the exterior of a house? How can
I construct the voice of a historical narrator with authenticity? How should I
depict a physically atypical character? Few books on the market address the
nuances in these questions, yet they are the ones that most writers grapple with on a daily basis. Danger on the Page: A Fiction Writer's Guide to Sex, Violence, Dead Narrators, and Other Challenges identifies and explores some of the more common and intractable situational challenges of fiction writing, with chapters grouped into the general subject
areas such as scenes, characters, points of view, and settings. Shawver delves
into the pitfalls and opportunities of writing about sex, violence, sports, and
love; he examines writing from the perspective of a different race, gender, or
species; he interrogates conventional beliefs about the use of brand names, the
description of architecture, and the portrayal of nature. Throughout, he
gives dozens of tips for recognizing the "litany of questions" that writers like to
answer, and offers practical advice on how to borrow (or reject) other writers' techniques and explore the myriad challenges of fiction
writing on their own. A lively and witty approach to a diverse range of specific
writing issues, Shawver's book will appeal especially to intermediate-level
writers seeking to bring their craft to the next level.

Leading Change became a runaway best seller, outlining an eight-step program for
organizational change that was embraced by executives around the world. Then,
Kotter and co-author Dan Cohen's The Heart of Change introduced the revolutionary
"see-feel-change" approach, which helped executives understand the crucial role of
emotion in successful change efforts. Now, The Heart of Change Field Guide
provides leaders and managers tools, frameworks, and advice for bringing these
breakthrough change methods to life within their own organizations. Written by Dan
Cohen and with a foreword by John P. Kotter, the guide provides a practical
framework for implementing each step in the change process, as well as a new
three-phase approach to execution: creating a climate for change, engaging and
enabling the whole organization, and implementing and sustaining change. Hands-on
diagnostics—including a crucial "change readiness module"—reveal the dynamics that
will help or hinder success at each phase of the change process. Both flexible and
scalable, the frameworks presented in this guide can be tailored for any size or
type of change initiative. Filled with practical tools, checklists, and expert
commentary, this must-have guide translates the most powerful approaches available
for creating successful change into concrete, actionable steps for you and your
organization. Dan Cohen is the co-author, with John P. Kotter, of The Heart of
Change, and a principal with Deloitte Consulting, LLC.

**Ecocriticism and the Idea of Culture**

Helena Feder 2016-04-29 Ecocriticism and the Idea of Culture: Biology and the Bildungsroman draws on work by Kinji Imanishi, Frans de Waal, and other biologists to create an interdisciplinary, materialist notion of culture for ecocritical analysis. In this timely intervention, Feder examines the humanist idea of culture by taking a fresh look at the stories it explicitly tells about itself. These stories fall into the genre of the Bildungsroman, the tale of individual acculturation that participates in the myth of its complete separation from and opposition to nature which, Feder argues, is culture’s own origin story. Moving from Voltaire’s Candide to Mary Shelley’s Frankenstein and from Virginia Woolf’s Orlando to Jamaica Kincaid’s Lucy, the book dramatizes humanism’s own awareness of the fallacy of this foundational binary. In the final chapters, Feder examines the discourse of animality at work in this narrative as a humanist fantasy about empathy, one that paradoxically excludes other animals from the ethical community to justify the continued domination of both human and nonhuman others.
