SCIENTIFIC RESEARCH IN EDUCATION

National Research Council. 2002-03-28 Researchers, historians, and philosophers of science have debated the nature of scientific research in education for more than 100 years. Recent enthusiasm for “evidence-based” policy and practice in education has now coalesced in the federal law that authorizes the bulk of elementary and secondary education programs. For too long, scientific research in education has described the similarities and differences between scientific inquiry in education and scientifi c inquiry in other fields and disciplines and provides a number of examples to illustrate these ideas. Its main argument is that all scientific endeavors share a common set of principles, and that each field including education research develops a specialization that accounts for the particulars of what is being studied. The book also provides suggestions for how the federal government can best support high-quality scientifi c research in education.

This videotape-winner of the President's Committee for the Arts and Humanities and the National Endowment for the Arts is an essential educational resource that will help schools and educators meet the challenges of teaching all young children. The Creative Curriculum describes the similarities and differences between scientific inquiry in education and scientifi c inquiry in other fields and disciplines and provides a number of examples to illustrate these ideas. Its main argument is that all scientific endeavors share a common set of principles, and that each field including education research develops a specialization that accounts for the particulars of what is being studied. The book also provides suggestions for how the federal government can best support high-quality scientifi c research in education.

Integrating Computer Technology into the Classroom

Gary R. Morrison 2002 This guide for K-12 teachers presents a model for creating lesson plans which integrate computer technology into the curriculum. Morrison (Instructional technology, Wayne State U.) and Lowther (Instructional design and technology, U. of Memphis) emphasize the use of the computer as a tool for learning.

RECENT progress in educational technology is strong interest in providing effective support for learning in complex domains and systems. The ASSURE case studies are supported by video, guided reflection prompts, and lesson plans that demonstrate strong technology integration and lesson planning. In addition to preparing educators with best practices to incorporate technology and media, we also need to address the needs of 21st-century learners. One major concern is the need for learners where and as they are, integrating technology into effective learning places. Significant and systematic progress in learning support for complex domains demands further attention to these important issues.

Learning from Media Richard E. Clark 2001-12-01 This volume incorporates essays questioning the meta-analyses of computer-based instruction research, Robert Kozma’s counterpart theory of “learning with media,” science-based technology versus experience-based craft and science-based “authentic technologies”.
