Reflecting the current approach to joint postgraduate training programmes, the handbook takes an integrated approach to both subjects. It covers the basic principles of bacteriology and virology, along with specific guidance on infectious diseases as well as modern microbiology. This new edition also presents a fresh perspective on the role of nurse practitioners in both small- and large-scale global health, future status of advanced practice nursing. Key topics include: Public relations of global disease, and the diminished economic capacity of many countries to meet anticipated needs in the future. Now including new topics on important subjects such as microbiology specimen collection, commonly used media, molecular diagnostics, and antimicrobials in pregnancy, as well as incorporating new guidelines from WHO, NICE, and BASHH among others, this handbook ensures that the information you need is accessible, clear, and easy-to-understand. Practical and comprehensive, this handbook includes coverage of National Frameworks and current legislation, together with information on topical issues such as bioterrorism and preventative medicine. Fully reviewed by specialist senior readers, and with useful links to up-to-date clinical information and online resources, this is an important addition to the Oxford Handbooks Series. Nursing Interventions & Clinical Skills - E-Book Anne Griffin Perry 2015-01-08 Master nursing skills with this guide from the respected Perry, Potter & Ostendorf author team! The concise coverage in Nursing Interventions & Clinical Skills 6th Edition provides the information needed to use evidence-based practice to solve clinical problems. Safe Patient Care Alerts highlight unusual risks in performing skills, so you can plan ahead at each step of nursing care. Delegation & Collaboration guidelines help you make decisions in whether to delegate a skill to unlicensed assistive personnel, and indicates what key information must be shared. Special Considerations indicate additional risks or accommodations you may face when caring for pediatric or geriatric patients, and patients in home care settings. Documentation guidelines include samples of nurses’ notes showing what should be reported and recorded after performing skills. A consistent format for nursing skills makes it easier to perform skills, always including: Assessment, Planning, Implementation, and Evaluation. A Glove icon identifies procedures in which clean gloves should be worn or gloves should be changed in order to minimize the risk of infection. Media resources include skills performance checklists on the Evolve companion website and related lessons, videos, and interactive exercises on NursesOnline. NEW! Coverage of evidence-based techniques to improve patient safety and outcomes includes the concept of care bundles, structured practices that have been proven to improve the quality of care, and teach-back, a new step that shows how you can evaluate your success in patient teaching. NEW! Coverage of HCPCS (Hospital, Critical Care Quality Information from the Consumer Perspective) introduces a concept now widely used to evaluate hospitals across the country. NEW! Teach-Back step shows how to evaluate the success of patient teaching, so you can be sure that the patient has mastered a task or consider trying additional teaching methods. NEW! Updated 2012 Infusion Nurses Society standards for IV therapy — such as safety for administering IVs, as well as other changes in evidence-based practice. NEW topics include compounding with cognitively impaired patients, Discharge planning and transitional care, and compassion fatigue for professional and family caregivers — all included in this new edition. Best Care at Lower Cost Institute of Medicine 2013-05-10 America’s health care system has become too complex and costly to continue business as usual. Best Care at Lower Cost explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation’s economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the path to achieve continuous improvement and better quality care at a lower cost. The costs of the system’s current inefficiencies underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009—roughly $750 billion—was wasted on unnecessary services, excessive administrative costs, fraud, and other problems. Moreover, unnecessary costs themselves can cause harm. By avoiding waste and reducing waste, we might have averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train patient, practice, and learn new information cannot keep pace with advances in health care disciplines and population demographics. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapists, which can increase the potential for misinformation, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. Best Care at Lower Cost emphasizes that a better understanding of a fully integrated care system is necessary. Central Venous Access Devices

Central venous access devices (CVADs) are used within a variety of areas in both hospital and community health care settings to administer blood or fluids, to provide long-term access for repeat transfusion of blood or blood products, chemotherapy, parenteral nutrition and antibiotic therapy, and to provide immediate access in emergency situations. Central venous access devices is a practical guide to the care and management of CVADs aimed at student nurses, newly qualified nurses and more experienced nurses who are unfamiliar in dealing with these devices.

Central venous access devices addresses patient assessment and education, relevant anatomy and physiology, appropriate device selection, and guidelines on insertion, follow-up care and management of CVADs. Each category of CVAD - including peripherally inserted central catheters, non tunnelled central venous catheters, skin tunnelled catheters and implanted ports - is explored in turn. Central venous access devices also addresses patient assessment and education, relevant anatomy and physiology, appropriate device selection, and guidelines on insertion, follow-up care and management of CVADs, and patient perspectives on living with a CVAD.
